

# RDS6110 Hydra System

- The RDS6110 Hydra System is the next evolution of AeroClave's patented ADP port technology.
- The RDS6110 Hydra System provides the ability to decontaminate multiple areas or rooms from a single point of operation.
- The entire system is operated by AeroClave's portable RDS 6110 Hydra unit, meaning the installed Hydra Hubs require no power.
- This also provides a portable solution that can be used to decontaminate rooms or areas that are not equipped with an installed RDS6110 Hydra System.
- The RDS6110 Hydra System is modular and expandable, allowing for:
  - Multiple Hydra Hubs to be installed throughout a facility, if needed.
  - Additional Hydra Hubs to be added in the future.

# Hydra Applications

- K9 kennels
- Meat rooms
- Locker rooms
- Weight rooms
- Jail and holding cells
- Administrative offices
- Food service and preparation areas
- Classroom & patient rooms

The RDS 6110 Hydra unit powers and controls the Hydra Hub, selecting areas for decontamination with precise programmability.

The Hydra Hub feeds disinfectant fluid and air to remote spray nozzles, supporting up to 12 nozzles that can be installed within a 50-foot range.

Spray nozzles feature a tamper-proof, anti-ligature flush design, allowing flexible installation in a wide range of environments while maintaining safety.

The Hydra System Monitor enables facility-wide programming and management, providing operators direct access to room and hub settings for accurate and consistent decontamination.

The Hydra Hub serves as the central connection point for the system and can support up to 12 separate areas or rooms.

With a low-profile design and durable powder-coated finish, the Hydra Hub can be integrated into both new construction and existing facilities.

Two quick-connect adapters supply power, disinfectant fluid, and air from the RDS 6110 Hydra unit to the Hydra Hub.
